COMPANY OVERVIEW

NLC Cloud Technologies Inc. is a cloud and **AI security consultancy** helping organizations adopt AI safely — through readiness assessments, AI governance and policy, and shadow-AI discovery — backed by 30+ years of enterprise experience supporting large-scale environments (2,200+ users). Our work enables organizations to strengthen security and compliance, protect sensitive data, and meet the AI governance expectations now appearing in RFPs, cyber-insurance requirements, and client security reviews — on the secure cloud foundations this depends on.

CORE COMPETENCIES

AI SECURITY READINESS ASSESSMENTS

Structured reviews of AI usage, data exposure, and policy gaps, delivered as scored reports with prioritized remediation roadmaps.

AI GOVERNANCE & POLICY

Acceptable-use policies, data-handling rules, tool-approval workflows, and staff training — governance packs organizations can show clients, insurers, and regulators.

SHADOW AI DISCOVERY

Inventory and risk-rating of sanctioned and unsanctioned AI across the environment, including AI features embedded in existing vendors.

CLOUD SECURITY & GOVERNANCE

Security hardening, identity and access management (IAM), compliance alignment, and risk mitigation for cloud and SaaS environments.

MICROSOFT 365 & PLATFORM ADMINISTRATION

Administration, configuration, and support for Microsoft 365, collaboration tools, and cloud-based productivity platforms.

CLOUD STRATEGY & INFRASTRUCTURE MODERNIZATION

Architecture, migration, hybrid design, and modernization across Azure, AWS, and Google Cloud.

DIFFERENTIATORS

Specialist focus: AI security readiness for organizations without a dedicated security team — a need enterprise security platforms do not serve.

Black women-led small business contributing to supplier diversity, equity, and inclusion objectives and socioeconomic procurement targets.

30+ years of combined enterprise IT experience delivering secure, scalable, resilient solutions across large user environments (700–1,200+ users).

Founder-led delivery with direct access to senior expertise and accountable oversight throughout the engagement lifecycle.

Security-driven approach aligned with governance, compliance, and cloud best practices.

Practical, consultancy-scale delivery: we assess, govern, configure, and train — clear scope, honest claims.

PAST PERFORMANCE

SECURITY IMPROVEMENT

Strengthened the security posture of 5 organizations through governance controls, identity protection, and secure cloud configuration.

Supported deployment of 20+ security policies and configuration baselines, improving compliance alignment and reducing risk exposure.

CLOUD MODERNIZATION

Supported modernization initiatives across enterprise environments (700–1,200+ users), improving scalability and performance.

Contributed to 8+ cloud migrations and environment optimizations, reducing provisioning timelines.

OPERATIONAL RESILIENCE

Maintained secure, scalable environments supporting 1,500+ daily users across multiple business units.

Reduced service interruptions and enhanced business continuity for 4 client environments.

AUTOMATION ENABLEMENT

Supported workflow automation across 6 departments; rolled out 10+ automated workflows, reducing manual work and improving consistency.
